

# ZEYRON

- *Geographical area of intervention*

International

- *Occupation/specialisation*

Company specialised in innovation and technology for the efficient regulation, control and management of water.

## *Short and long term objectives*

Zeyron is a technological company whose principal objective is research concerning products related to water and energy savings deriving from the consumption of hot water.

To become a world-wide name in the electronic control of water.

## *Key needs*

Maximum diffusion of the innovation and internationalization of the company. Belonging to a distribution platforms such as that of the Project Insméd will enable the firm to break into the field of eco-innovation in construction.

Business links to integrate its engineering business in other companies

Getting the message across to public entities to integrate the firm's products into their equipment. Have the opportunity through workshops and events to present the firm's innovation in home automation and explain the comparative benefits against traditional systems in terms of economic sustainability.

## Our offer

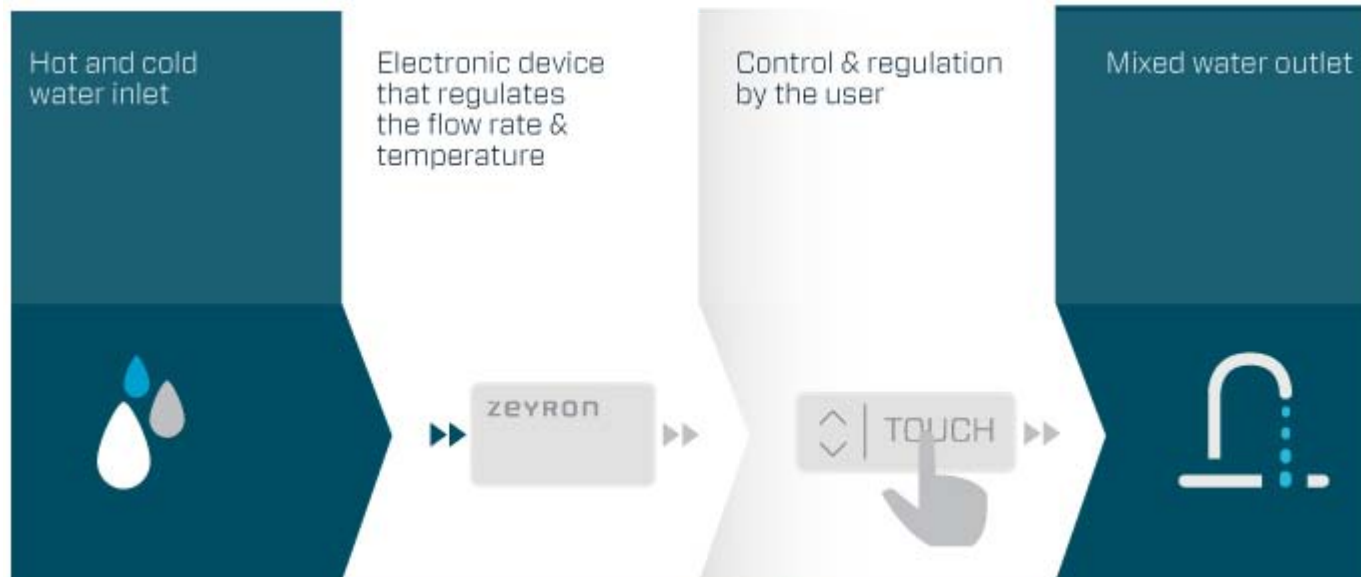

Own development of the products of the Zeyron Technologies range, through carrying out R+D+i projects.

Complete management of water in buildings through the firms [Aquance](#) system.

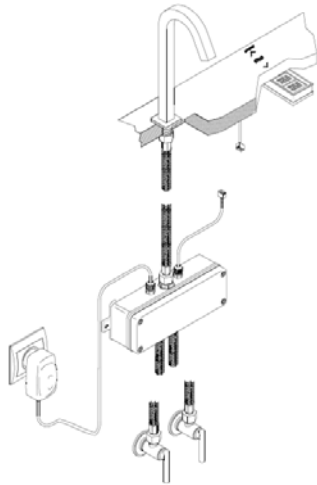

### CORE BUSINESS ZEYRON

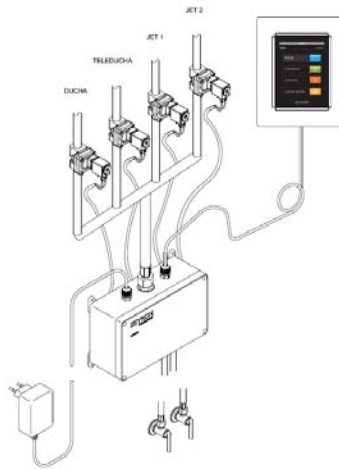

## Our advantages

**Important investment in R+D+i** for the continuous improvement of the firm's products. The final consequence of this process of research has been the placing in the market, with its subsequent commercialisation, innovative products such as the Electronic Mixer MX and the Electronic Thermostatic TH; as well as the Aquance system for the remote management of these devices.

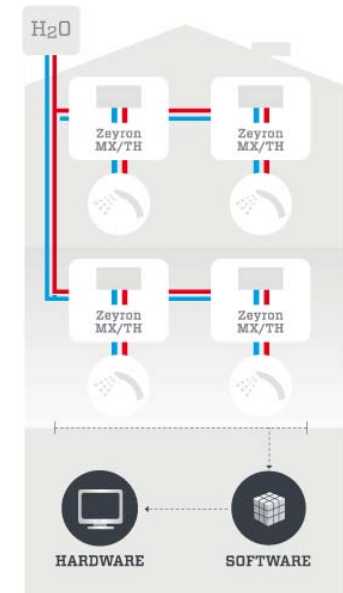

### MX. Electronic Mixer

### TH. Electronic Thermostatic

### Aquance. Water management system for buildings

*Smart technology offering many possibilities: the safety of people, the efficiency use of water and energy; the comfort of the people; and aesthetics and design.*

## Ideal Agreement

### *What we need:*

- Partners who wish to integrate Zeyron's technologies and products to offer joint market solution.

### *What we can offer:*

- Innovative technology and solution for the optimisation in water and energy consumption.
- Projects and solutions adapted to the specific needs of each client.
